MLOps Assignment1

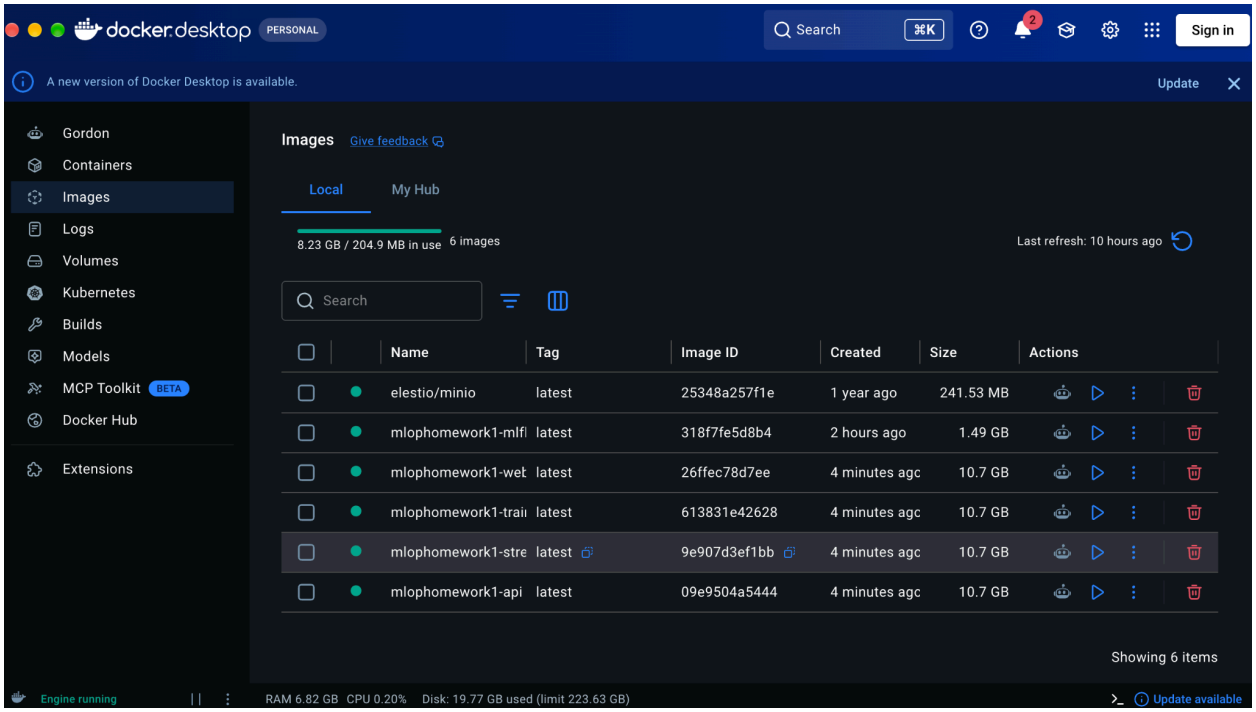

1. Docker Containers Status (VS Code Terminal)

Output from running `docker ps` in the VS Code integrated terminal, displaying active services and container statuses for the MLOps pipeline including Streamlit, API, Webhook, MinIO, and MLflow.

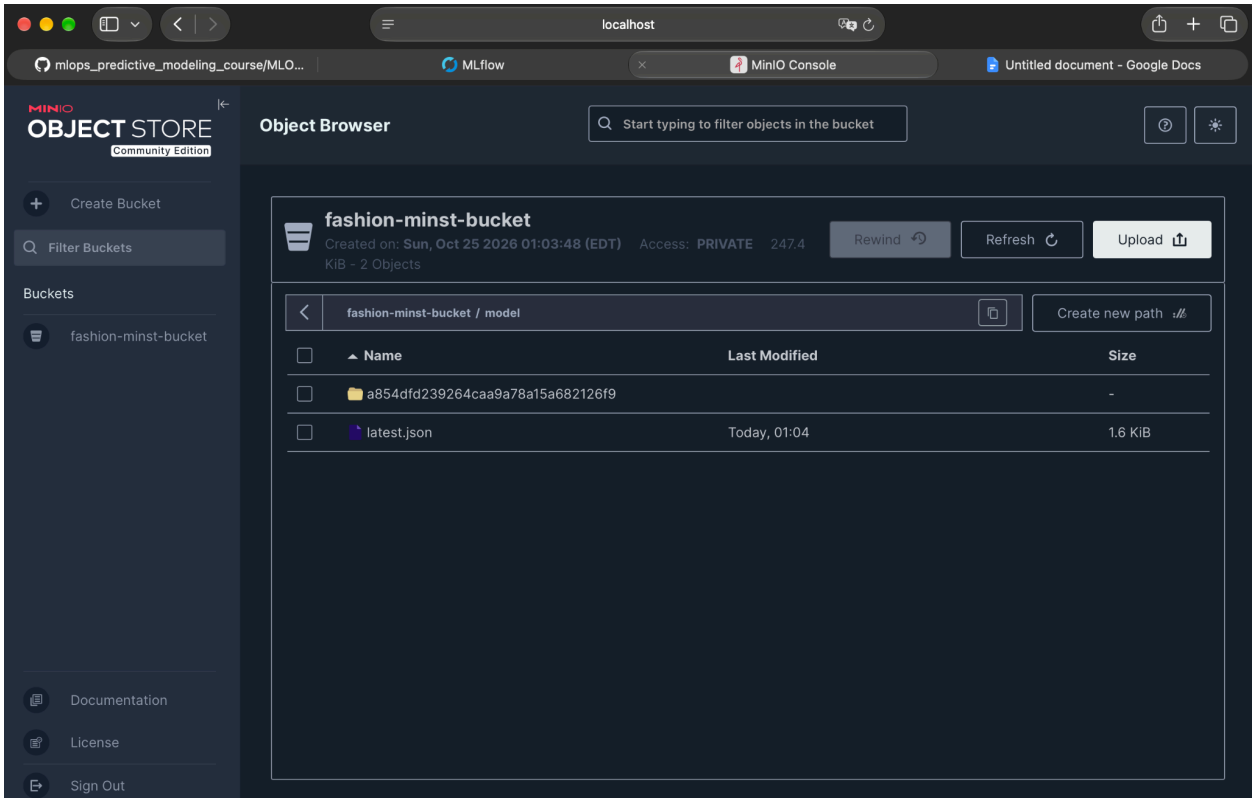

2. Docker Desktop Local Images

Overview of the built container images within Docker Desktop, including repository tags, image IDs, creation times, and relative sizes for each MLOps service component.

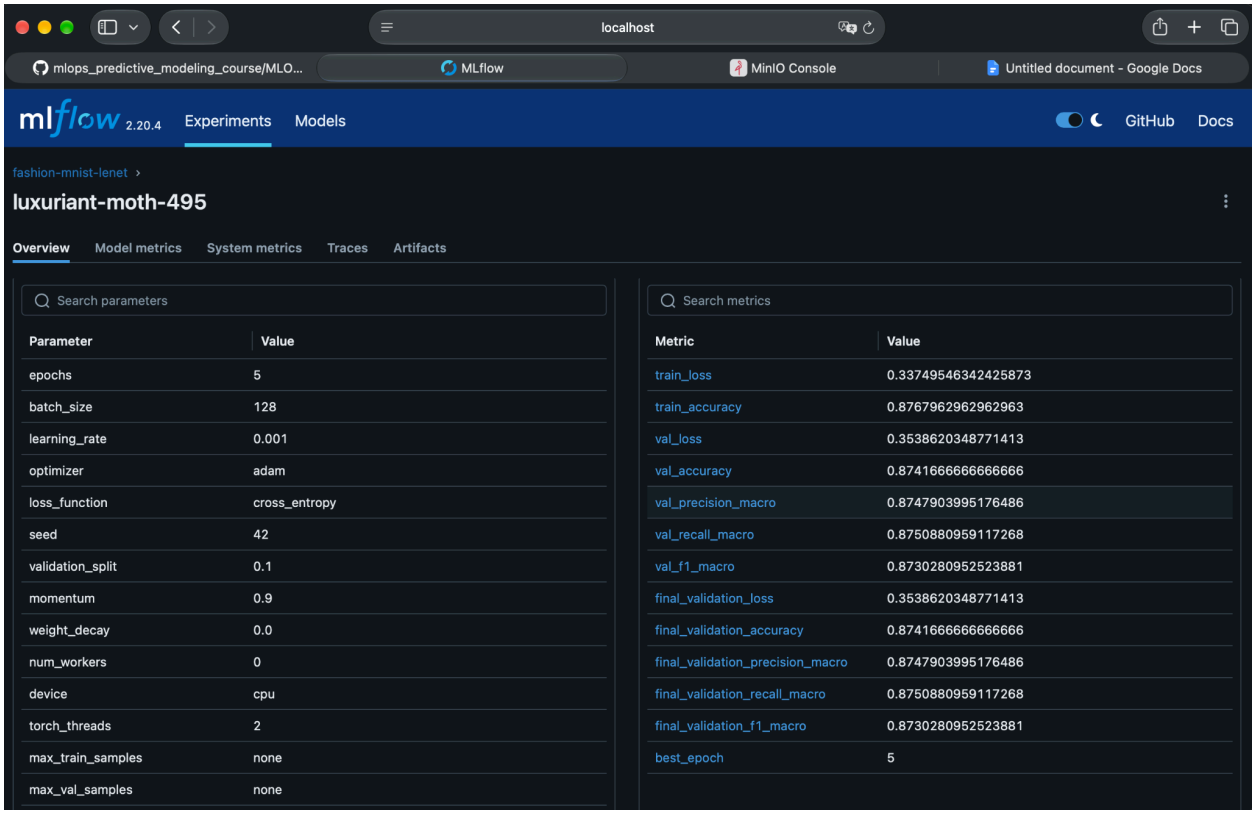

3. MinIO Object Store Browser

The MinIO web console showing the `fashion-minst-bucket` bucket structure containing logged model artifacts and metadata files.

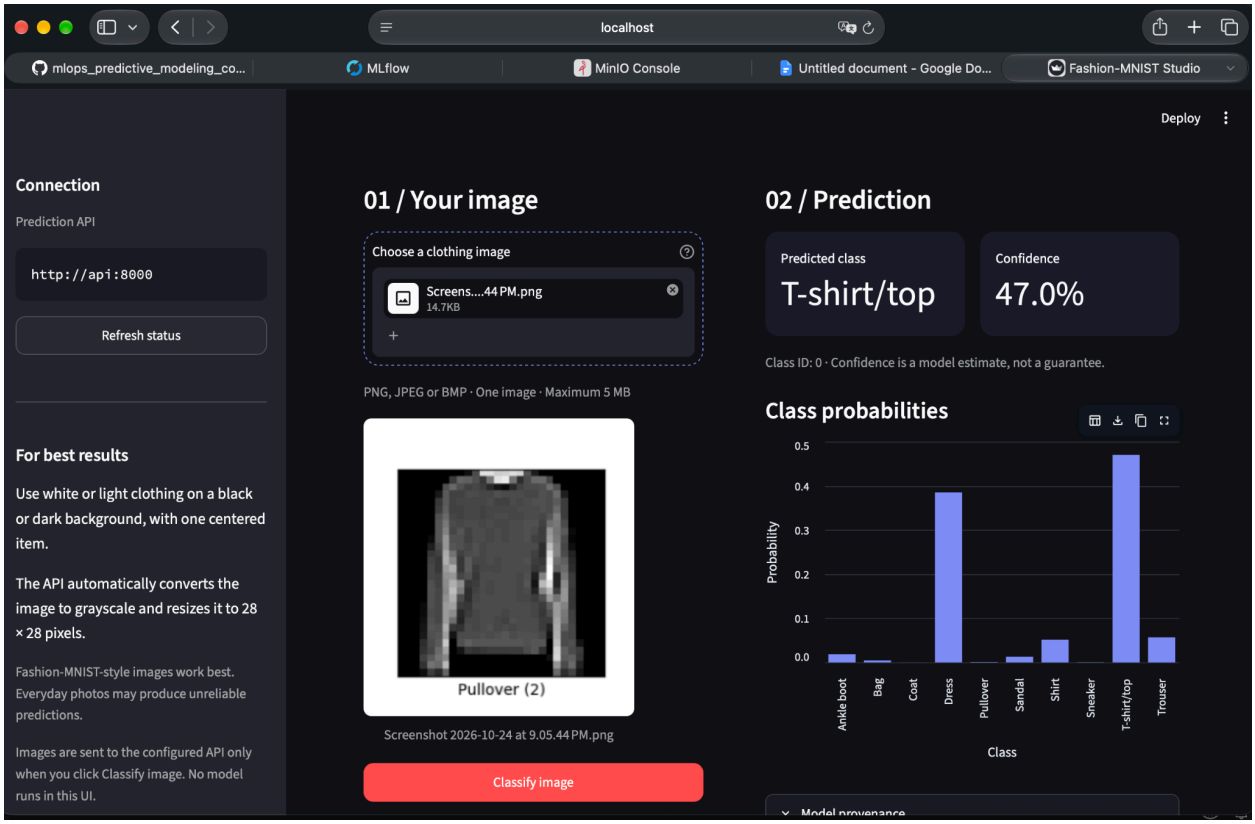

4. MLflow Experiment Tracking & Metrics

MLflow UI displaying experiment run details (`luxuriant-moth-495`), highlighting hyperparameter configurations and logged validation/training metrics.

5. Streamlit Application UI

The user interface for the Fashion-MNIST prediction web app, demonstrating image upload, classification execution, predicted class results, and class probability distributions.

For best results
Use white or light clothing on a black or dark background, with one centered item.
The API automatically converts the image to grayscale and resizes it to 28 × 28 pixels.
Fashion-MNIST-style images work best. Everyday photos may produce unreliable predictions.
Images are sent to the configured API only when you click Classify image. No model runs in this UI.
